Transformational

Personal change is the reason for intervention. Collaborative

A shared visioning approach is used – not one person's perspective. **O** Outcomes

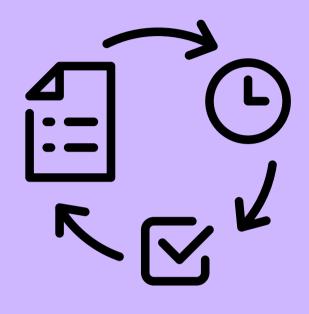

Measures are relevant to decisions about the approach or proposed impact of interventions.

Equine-Assisted Collaborative for Health

Mission

To create a collaborative space joining people and data together for understanding the impact of equine-assisted practices on the lives of people

Goals:

- To identify and connect people and programs engaged in equine-assisted practices
- Share data on the understanding of who benefits and in what ways from equine-assisted practices
- Support scientific advancement in the field of equine-assisted practices--through assistance with measurement, methods and precision analytics

Practitioners

Guide others in ensuring the best outcome to promote physical, mental, behavioral, and spiritual health.

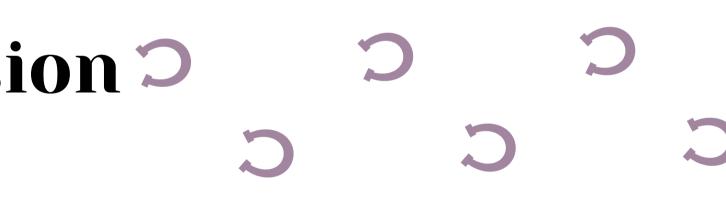

ວ ລ ອ Partnership Vision ອ ວ ວ ວ

Caregivers

Provide insight into what they need to feel support for growth and development as they journey.

Researchers

Share the effectiveness of interventions for individuals with specific conditions.

Volunteers

Share why and how they contribute to creating safe environments.

Equine Assisted Collaborative for Health (EACH)

EACH is intended to serve as a hub for collaboration and a beacon for gathering information and resources specific to ideas,...

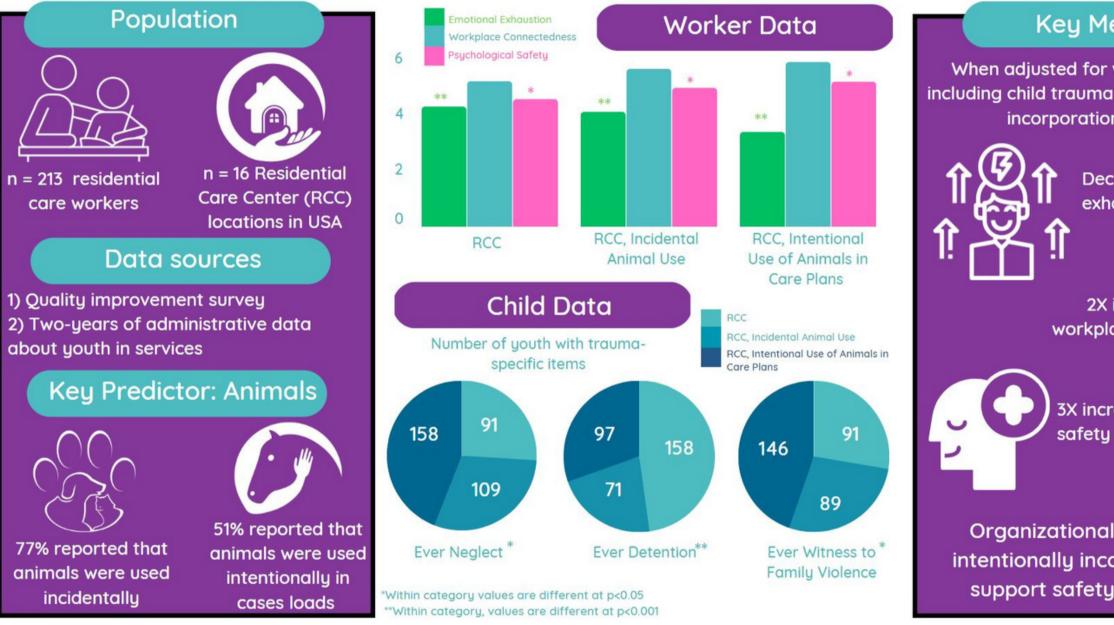

Example visual abstract

Lower emotional exhaustion among employees is associated with intentional incorporation of animals into residential care settings

behavioral sciences

an Open Access Journal by MDPI

Lower Emotional Exhaustion among Employees Is Associated with Intentional Incorporation of Animals into Residential Care Settings

Kimberly I. Tumlin; Elizabeth N. Riley; Olga Vsevolozhskaya; Michael Cull

Key Messages

When adjusted for work stress factors including child trauma exposures intentional incorporation of animals:

> **Decreased motional** exhaustion

2X increase in workplace safety

3X increase in psychological

Organizational cultures which intentionally incorporate animals support safety culture habits.

Your feedback is needed!
